

THE BENEFITS OF SPENT MUSHROOM SUBSTRATE

Use as garden mulch AND soil conditioner for best results and it's environmentally friendly too!!

Using mushroom substrate on your garden recycles a product which would otherwise be disposed of as waste. As the substrate itself is recycled by-product from primary industry, you're **DOUBLE RECYCLING!!**

Use mushroom substrate as a:

- Mulch
- Soil conditioner
- Potting mix additive

It is great for:

- Most flowering plants
- Trees and shrubs
- Vegetable gardens & herbs
- Establishing lawns

** not recommended for some native plants and acid-loving plants such as azaleas, camellias and rhododendrons.*

You can save water with mushroom substrate because it:

- Stores up to 70 percent of its own weight in water
- Improves transmission of water through the soil
- Keeps the soil cooler in warmer weather, warmer in cooler weather and increases soil resistance to both wind and water erosion

How to use mushroom substrate in a new garden bed:

- Spread mushroom substrate on the soil surface
- Incorporate the substrate into the top 10 to 30cm of the soil
- Allow about 1 week for substrate to settle and blend with the soil
- Sow the seeds or transplant the plants
- Water well initially

So ask your local nursery or garden supply outlet for genuine Mushroom Substrate!!
